AUTOMATED SMALL PARTS STORAGE SYSTEM

we know how

Power | Process | Offshore | Oil & Gas | Projects

The Fast Delivery System

BUHLMANN GROUP is known for its excellent services and is constantly working to improve its service offerings to its customers. One example of this is the automated small parts storage system, which is managed completely independently by robots at the Duisburg site. This results in much faster turnaround times throughout the process, allowing the entire range of products carried by the automated small parts storage system to be delivered nationwide within Germany within 24 hours and throughout Europe within 48 hours by parcel service.

Storage bin organisation in the automated small parts storage system is handled by seven robots. Goods are stored in the system at three order picking locations or picked from them for further processing.

Here, up to 4000 movements per day are possible. Products for the following fields are stored in the automated small parts storage system:

- Power
- Process
- Offshore
- Oil & Gas
- Projects

The products are available in carbon, alloy and stainless qualities.

We stand for premium service.
